	provisions in merger agreements are used to benefittahareholders or for agency/entrenchment reas Background/Relevance—Target firms typically employ either an auction or a negotiation method d merger negotiations. In auction deals, the pre-public takeover process involves contacting several bidders, signing confidentiality/stdstill agreements and accepting private bids. In negotiation however, the target engages with only <b>bidder</b> in the pre-public takeover process. When directors put a company up for sale (by initiating an active bidding process, by see alternate buyer in response to an unsolicited acquisitionosal, or by approving a transaction resulting the sale or change of control) their fiduciary dotanges from preservation of the company as a corp entity to obtaining the highest possible price for the stareholders. Further, directors have the burde proving that they were adequately informed anted in the best interests of shareholders. Demonstration of fiduciary duties is relatively revident if the target board adopts an auction se method since there appears to be a submarket check of target firm value prior to signing of the me agreement. However, nearly half <b>all</b> merger deals are structured negotiations. In such cases, tar boards may fulfill their fiduciary duty by signing a mergagreement and testing the transaction with p signing market check. Results/Analysis—We find that go-shop provisions are more likely in deals involving negotiation s method, financial buyers and all cash financing, and in targets with less valuation uncertainty. We go-shops have a positive association with the initial offer premium. Results suggest that deals with provisions are more likely to have a competing <b>artice</b> an upward revision of the initial offer premiu Collectively, our results indicate that go-shops affective contractual devices used to further tar shareholder interests. Conclusion/Implications: Our analysis suggests that go-shops do not appear to be a superficial att demonstrate fiduciary duty: active solicitation of	uring pote deal king g in orat n of get ind go- get get rget	ontia s an e ost- g that shop
12:25 - 12:35	Paper Title: "Switching from a Semi-computerized to anlice Employment Application System: A Ca Study"	se	
	Authors: Deanna House Research Question-This case study research explores thread the system. The research question is: W factors would lead to the failure of a change project an existing semi-computerized to an almost fr computerized online system? Background/Relevance-This research aligns with change management literature and so implementation research. It is valuable for stusteentid the research community that the researc provides insights from both theory-driven and practice perspectives. The project implementat team experienced several factors that contributedproject failure: lack of accountability, po communication, lack of user involvement, usersistance to change, and inadequate requiren specifications. These factors combined riboted to the failure of the project. Results/Analysis-This research was a write-up/case study of a real-world software implementation failure. Project failures are costly mistakes to make in a company. Learning about other con failures provide an excellent framework from which tidothe skills necessary to work with users to el requirements. This case is an example of how theofolite business analyst is key to any project involv the implementation of software; particularly thation/involves a switch from semi-computerized to onli Conclusion/Implications-This case provides students with a real-world case of project failure due to of accountability, poor communication, inadequate requirements are learning about project requirement project management, and the SDLC, the concepts typically discussed during lectures are hard to and apply to actual projects. For example, the toaffacebetween different detagements methodologies i real world projects. Additionally, the complicants that are faced when multiple stakeholders departments are involved. Students can use tists trabridge the gap between learning from a textt and working in industry as an IT professional. 	activity. Conclusion/Implications—Drone technology is often viewed as a "surgical tool" that can precisely effectively eliminate genuine terror threats. This w <b>ch</b> allenges this view. We find that the first-b	est	
	scenario discussed by many academics and policysnakserunlikely to occur in reality. The ma implication is that, even to the extent that drones are effective at killing intended targets, strespolyby exporting state-produced terror to distant populations. Detrikes may eliminate specific targets, but the do not remove terror, which is instead propagated by UtS. drone program. This has implications for U	ney	
4.05	credibility with foreign populations as well asetbificacy of U.S. counterterrorism policy.
